## Maritime Expeditionary Standoff Response (MESR)

The TiTAN Underwater Disruption system is an agnostic payload that enhances remotely operated underwater vehicles with disruption capabilities. Collaboration between ADAPTOS and Video Ray has resulted in a widely tested and continuously optimized underwater disruption system for underwater explosive threat mitigation.

### OPERATIONAL EMPLOYMENT

- Pier Search and hazard clearance before docking large vessels
- Littoral Explosive Ordnance Neutralization (LEON)
- In port security response to threats
- Very shallow water clearance
- Littoral clearance
- Mine countermeasure missions
- Deep water shipping lane clearance
- Expeditionary advanced base
- Operations for island hopping

# Underwater Disruption Now!

### KIT INCLUDES

- Underwater TiTAN system
- 18 AWG firing wheel
